6. Insert the mag well adapter (65)

Important Information regarding magazines:

The Czech Small Arms mag well adapter was designed specifically for aluminum mil-spec USGI M16/AR-15 5.56x45mm magazines. The adapter was not designed to function with polymer magazines. During research and development of the mag well adapter, CSA confirmed that different brands of M16/AR-15 magazines can vary considerably in size and in construction. Due to the limited space within the vz.58 magazine well, CSA could not design the adapter to function with all M16/AR-15 magazines found on the market. It is this reason that CSA designed the adapter to function reliably with aluminum mil-spec USGI magazines.

For highest reliability in feeding, activation of bolt catch, and dropping freely of the mag well adapter when ejected, CSA recommends the new manufacturer branded magazines below. These mil-spec USGI M16/AR-15 magazines exhibited outstanding fit and function during mag well adapter testing.

- NHMTG

- D&H Industries

- Okay Industries

- Lancer model L5AWM
